1 Lifetime & Past 30 Days Frequency of Use Across Years

The first set of graphs present data on the frequency of use. For each drug, there is a chart reporting *Lifetime Use* (the percentage of students who reported any use in their lifetime) and *Past 30 Days Use* (the percentage of students who reported use in the past 30 days).

2 Perceived Risk of Use

The second set of graphs present data on the perceived risk of drugs. Each graph presents the percent of students who think that people put themselves at *Moderate Risk* or *Great Risk* if they smoke one or more packs of cigarettes per day, try marijuana once or twice, smoke marijuana regularly, or take one or two drinks of an alcoholic beverage nearly every day.

Smoke One or More Packs of Cigarettes per Day

Moderate Risk or Great Risk

3 Parental Disapproval of Use

The third set of graphs present data on the student's perception of their parents disapproval of using drugs. Each graph presents the percent of students who think that their parents would feel it is *Wrong* or *Very Wrong* for the student to drink alcohol, smoke cigarettes or smoke marijuana.

5 Protective and Risk Factors

The fifth set of graphs present data on protective and risk factor scores across years for the domain groups of community (factors about the community the student lives in), family (factors about the students family), school (factors about the school the student attends) and peer-individual (factors about the student and the student's peers).
